Chapter 1: Introduction – Renovating with Confidence in Saskatchewan

Renovating a home in Regina or across Saskatchewan comes with unique challenges: cold winters, temperature swings, and the need for durable, energy-efficient materials. At **CBS LTD**, we've helped homeowners plan and complete kitchen renovations, door replacements, and window upgrades for years.

This guide is designed to give you clear, honest information, so you can renovate with confidence, avoid costly mistakes, and invest in upgrades that truly add value.

Chapter 2: Understanding Your Home Renovation Goals

Before choosing cabinets, windows, or doors, it's critical to define *why* you're renovating.

Common renovation goals:

- Improve energy efficiency
- Increase home value
- Modernize outdated spaces
- Improve comfort and functionality

CBS Pro Tip: Regina homeowners often prioritize *energy efficiency* first due to heating costs. Doors and windows, and kitchens should be planned together, not separately.

Chapter 3: Kitchen Renovation Fundamentals (Regina Homes)

The kitchen is the most used room in the home, and one of the highest ROI renovations.

Key kitchen renovation elements:

- Layout (work triangle: sink, stove, fridge)
- Storage and cabinetry
- Countertops and surfaces
- Lighting and ventilation

Local Insight: Many Regina homes benefit from semi-custom cabinetry to maximize storage in smaller or older floor plans.

Chapter 4: Kitchen Cabinets, Countertops & Storage Solutions

Cabinet Options Offered by CBS LTD:

- Melamine cabinets (cost-effective, durable)
- Thermofoil cabinets (easy maintenance)
- Custom and semi-custom cabinetry

Countertop Choices:

- Quartz (low maintenance, modern)
- Laminate (budget-friendly)
- Solid surface materials

Real-World Comparison Table

Material	Avg Lifespan	Maintenance	Cost Range (CAD)
Melamine Cabinets	15–20 years	Low	$–$$
Quartz Countertops	25+ years	Very Low	$$–$$$
Laminate Countertops	10–15 years	Low	$

Chapter 5: Doors That Protect, Insulate & Impress

Doors are more than entry points—they affect security, insulation, and curb appeal.

Popular Door Types in Regina:

- Steel entry doors (high insulation)
- Fiberglass doors (durable, low maintenance)
- Patio and garden doors

Energy Efficiency Facts:

Door Type	Insulation Rating	Best Use
Steel	Very High	Front & side entrances
Fiberglass	High	Entry & patio doors
Wood	Medium	Interior or protected entry

CBS LTD Recommendation: Steel or fiberglass doors are ideal for Saskatchewan winters.

Chapter 6: Windows for Energy Efficiency & Comfort

Old or inefficient windows can account for up to **25–30% of heat loss** in Canadian homes.

Window Styles We Commonly Install:

- Casement windows
- Sliding windows
- Bay and bow windows

Window Performance Table

Window Type	Energy Efficiency	Ventilation	Maintenance
Casement	Excellent	High	Low
Sliding	Good	Medium	Very Low

Bay/Bow	Good	Medium	Medium

Chapter 7: Materials Guide for Canadian Climate Homes

Choosing the right materials is essential in Regina's climate.

Best Materials for Saskatchewan Homes:

- Vinyl windows (excellent insulation, low maintenance)
- Fiberglass doors (resist warping)
- Moisture-resistant cabinetry

CBS Insight: Materials that perform well in mild climates may fail faster in extreme cold.

Chapter 8: Cost, ROI & Energy Savings Data

Average ROI by Renovation Type (Canada):

Renovation Type	Avg ROI
Kitchen Remodel	70–80%
Window Replacement	65–75%
Door Replacement	60–70%

Energy-efficient upgrades also reduce monthly heating costs.

Chapter 9: Common Renovation Mistakes (and How to Avoid Them)

- Choosing style over function
- Ignoring insulation values
- Poor installation
- Not planning for future needs

CBS LTD Approach: We guide you before you buy—so mistakes are avoided early.

Chapter 10: DIY vs Professional Installation

DIY Works For:

- Cosmetic updates
- Hardware changes

Professional Installation Recommended For:

- Doors and windows
- Cabinet installation
- Structural changes

Poor installation can void warranties and reduce energy performance.

Chapter 11: Planning Your Renovation Timeline

Typical timelines:

- Kitchen renovation: 4–8 weeks
- Door replacement: 1 day per door
- Window replacement: 1–2 days per project

Planning ahead ensures materials arrive on time—especially during peak renovation seasons in Regina.

Chapter 12: Why Work with CBS LTD – Local Expertise Matters

CBS LTD is proud to serve **Regina and surrounding Saskatchewan communities**.

What Sets Us Apart:

- Local product knowledge
- Trusted suppliers
- Personalized consultations
- Doors, windows, and kitchens under one roof

We don't just sell products—we help you build better spaces.

Chapter 13: Next Steps & Free Resources
